EurTradeNet

The **only** name you need to know.

EurTradeNet provides online electronic customs services through an interconnected network for developing trans-European services for customs and trade information exchange.

EurTradeNet offers high-quality efficient and secure Customs clearance support on 24 by 7 basis 365 days a year. This helps you to securely import and export goods across Europe and beyond with confidence.

EurTradeNet is a multi-national resource. It lets you tap into the knowledge of expert Customs-related service providers with over 20 years of experience in their own countries.

EurTradeNet members support in excess of 10,000 European traders communicating with more than 16 Customs Authorities and growing. The EurTradeNet customers benefit from our expertise of local customs administration systems and procedures.

Save time and Money with **EurTradeNet** experts help.

In an era of time-pressure and ever changing Customs regulatory requirements, when customers demand fast shipping and guaranteed delivery times, a European coordinated approach to Customs clearance can mean the difference between business success and failure.

Participants in the supply chain need more and more help in fulfilling their customs compliance requirements. The advent of Authorised Economic Operators (AEO) and the introduction of pre-arrival pre-departure information places increased pressure on those involved in International Trade.

EurTradeNet through its Service Oriented Architecture (SOA) friendly environment allows companies have a point of entry to all EC countries national customs administrations. We offer integration consultancy services to ensure your companies IT resources achieve the full range of ETN services. EurTradeNet also manages an automated messaging service that relays messages to keep customers informed about what is happening to each consignment in the system.

The integration with corporate systems guarantees the security policies of the companies regarding data protection and access. The automation of the system also means that human errors such as typing mistakes or problems filling in or translating documents can be avoided.
