

DEXX is a young, dynamic and innovative company managing a modern electronic platform that interconnects every branch in the logistics and transportation industry and also guarantees efficient and paperless customs information management.

DEXX supports all logistics processes and guarantees, as an active member of the association of Customs Related Software and Network Providers (CRSNP), the follow-up of changes which occur on a regular basis in the logistics world in order to ensure the permanent connectivity of its customers.

The message flow is supported by the DEXX Communication Tool (DCT). As a message control module, it uses advanced computer technology that enables secured and fast electronic information exchange between parties and allows integration with in-house company systems from other software developers and solutions integrators.

A web based track and trace system monitors all messages in real time.

DEXX also owns and manages the so called Brucargo Community System (BCS) which is the official Cargo Community System (CCS) at Brussels Airport. It offers a comprehensive range of communication possibilities and electronic information exchanges between airlines, integrators, general sales agents, forwarding agents, ground handlers, truckers and shippers, as well as Customs and other governmental bodies. BCS handles all kind of messages (CargoImp, Edifact, XML etc.) and performs format conversion when necessary.

As an example, it enables freight forwarders to manage their time-critical paperless transactions (such as electronic air waybills and customs declarations) with the Customs authorities, the carriers and their handling agents in a quick, simple and cost effective manner that substantially improves efficiency and reduces operating costs. BCS is integrated in a worldwide computerized network through several partnerships (SITA, Traxon, Descartes, etc.) in order to easily interchange information with them all over the world.

Last but not least, DEXX is a founding and active member of EurTradeNet that manages a trans-European network that interconnects Customs-Related Service Providers (CRSPs).
